DEALZ Redemption Flow Guide

For Merchant Staff

How the Redemption Process Works

Customers using DEALZ will receive a WhatsApp message when they claim a deal. Here's how the process works:

1. Customer Claims a Deal

- A customer receives a WhatsApp message from DEALZ containing:

1. A description of the deal.
2. Any applicable terms and conditions.
3. A CTA taking the customer to restaurant website or reservations page

2. Customer Redeems the Deal In-Person

All DEALZ redemptions are now handled in person. Follow these steps:

1. The customer informs your server that they have a DEALZ deal to redeem.
2. The customer shows their WhatsApp conversation with DEALZ, which contains the deal details, to the server.
3. The server verifies the DEALZ message and applies the deal to the final bill or provides the agreed benefit.

Important Notes for Merchant Staff

Verification: Ensure the customer shows their WhatsApp message from DEALZ directly. Do not accept screenshots or forwarded messages, as the deal must be tied to the original DEALZ user.

Deal Validity: Ensure the deal is valid and has not expired before applying it to the customer's bill.

Frequently Asked Questions

What if the discount code doesn't work?

Politely ask the customer to verify that they are entering the code correctly or contact DEALZ support for assistance.

Can customers redeem the same code multiple times?

No. Each discount code is unique and can only be redeemed once. If the customer has used the code already, it will not be valid again.
